

Michael Kelly

SOFTWARE ENGINEER

m.kelly.dev@gmail.com | Mountain View, CA • [LinkedIn](#) • [Github](#) • [Portfolio](#)

Software Engineer with 3+ years of experience at Google Cloud building backend systems and infrastructure. Experienced in owning complex engineering projects across service development, system design, and production operations, with additional experience building full-stack applications independently.

SKILLS

LANGUAGES • Java • Go • Python • TypeScript • JavaScript

CLOUD & INFRASTRUCTURE • Google Cloud Platform (GCP) • Kubernetes • Docker • Cloud Spanner • GCP IAM • Cloud Monitoring • Cloud Logging • Infrastructure as Code (IaC) • CI/CD

ARCHITECTURE & NETWORKING • gRPC • Protocol Buffers (Protobuf) • REST APIs • Microservices • Distributed Systems

BACK-END • Bun • Elysia • Node.js • Express • PostgreSQL • Prisma • Supabase • Redis

FRONT-END • React • Redux • Vite • HTML • CSS • SCSS

OTHER • Git • Linux • Bash • SSH

WORK EXPERIENCE

INDEPENDENT SOFTWARE ENGINEER • Self-Employed • Mountain View, CA Sep 2025 to Present

- Designed and implemented a full-stack Pokemon TCG collection platform using TypeScript, React, Redux, Bun, Elysia, PostgreSQL, Prisma, and Docker, building a REST API and responsive web application around a relational data model.
- Built authenticated collection management functionality including card and set browsing, complex filtering, collection and list tracking, user settings, and saved filter presets, with authorization and unit test coverage across the application.
- Developed integrations and automation for a streaming business, connecting Discord, Twitch, OBS, and VTube Studio to support community interactions and recurring content management workflows.

SOFTWARE ENGINEER • Google, Google Cloud Platform • Sunnyvale, CA Apr 2022 to Jul 2025

- Developed and maintained production services in Java and Go supporting GCP organization onboarding and provisioning, using Kubernetes-based infrastructure, Cloud Spanner databases, gRPC APIs, GCP IAM, and other internal tools.
- Implemented GCP-wide infrastructure compliance initiatives across multiple services, independently translating organization-level requirements into technical solutions for alerting, multi-party approval, regression prevention, and new audit-logging services while coordinating cross-team dependencies.
- Developed interactive user-facing RPC workflows supporting GDPR and data-residency requirements for European GCP resellers, guiding resellers and internal teams through service configuration and RPC execution inside and outside the default GCP environment.
- Implemented production service changes spanning RPC behavior, protobuf definitions, service configuration, and IAM policies, along with unit, functional, and end-to-end tests to validate changes.
- Supported production reliability through weekly on-call rotations for critical GCP onboarding services, resolving cross-team API requests, KTLO work, and production issues while troubleshooting service failures against a 99.9995% SLO and 30-minute response target.

EDUCATION

GEORGE MASON UNIVERSITY • Computer Science, 106/120 credits • Fairfax, VA 2015

APP ACADEMY • Full Stack Web Development • San Francisco, CA 2021
